## MAKEYOUR CHILD A MATHSSTAR!

A PARENTE' GUIDE TO HELPINGYOURCHILIREN WHTH MATHS

Booklet 3 of 3:
Key Stage 2
Year 5 to Year 6

## "IT WASN'T LIKE THIS WHEN W WAS ATECHODL!"

Have you ever wished that you understood current Maths methods better? Many parents find that their children are using methods or strategies, which are very different from those used in the past. This can often cause confusion when trying to support your child at home.

The main methods used in each year group by the majority of pupils for addition, subtraction, multiplication and division are shown. These methods are introduced throughout the teaching year so most pupils should be familiar with all methods by the end of the year. Each sheet also shows typical maths vocabulary that children will be acquiring and using at this stage.

This is a guide only, children will always progress at different speeds. However, support from you will undoubtedly be of great benefit to them at all times. If you have any questions, your child's teacher will be pleased to discuss the strategies with you.
N.B. If you have downloaded this booklet to print it, you may need to expand your print margins slightly to make it fit.

## Turn your child into a Mathemagician!

Year 5 \& 6 Addition

Formal
$47+76$
(change order to start with larger number)

$$
\begin{gathered}
47+76 \\
\text { c) } 47^{\text {a) }} \\
+\frac{76}{123} \\
\frac{1}{1} \\
\text { b) }
\end{gathered}
$$

a) Add 4 groups of tens
a) Partition numbers into tens and units
a) Add units first
b) Add groups of ten
b) Carry the tens
c) Add units
d) Add together tens and units

Formal

Add the jumps $=3+20+1+24$

81-57
b) $7_{1}$ c)
d) $\frac{81}{\frac{57}{24}}$ a)

81-57 could mean find the difference between the two numbers so we add on from the smallest number.
a) Add on to next multiple of 10
b) Add on groups of ten
c) Add on any extra units needed
a) Partition numbers into tens and units
b) Start with units, 1 take 7
c) To help us do this, we take 1 group of ten from 80 ...
d) ... to give us 11 take 7 which gives 4
e) Now we do 70 take 50 which gives 20
f) Answer is 24
a) Start with the units 1 take 7
b) Take one group of ten from 80, leaving 7 tens
c) This now gives us 11 take 7 which is 4
d) 7 tens take 5 tens gives 2 tens

Year 5 \& 6 Multiplication

$$
\begin{array}{|c|}
\hline \text { Jottings } \\
\hline
\end{array}
$$

$$
38 \times 7
$$

Formal

$$
38 \times 7
$$

38

| $\times 7$ |
| :--- |
| $56(7 \times 8)^{\text {a }}$ |

$\xlongequal[210(7 \times 30)]{ }{ }^{\text {b) }}$ 266
a) Partition number into tens and units
b) Arrange into a grid
c) Multiply 7 by 30
d) Multiply 7 by 8
e) Add together results from multiplying

Can you see how points $a$ and $b$ above relate to the answers $c$ and $d$ on the grid in the previous method.
a) Multiply 7 by 8 which gives 56
b) We carry the 5 tens
c) Multiply $\mathbf{7}$ by 3 tens, which gives 21 tens ...
d) ...plus the 5 tens equals 26 tens.

Year 5 \& 6 Division

## Visual

$44 \div 7$

$584 \div 4$

## Answer ls: $\mathbf{6}$ Jumps with 2 left over

## Repeated Subtraction

How many 7s can you remove from 44?
a) Keep removing chunks of 7
b) How many chunks of 7 can you remove?
c) Is there a remainder?

How many chunks of 7 in 161?
a) Remove 10 lots of 7 as our chunksize
b) Keep removing chunks of $(10 \times 7)$ until you cannot.
c) Use your times table knowledge to remove the last chunk
d) Is there a remainder?
e) How many chunks of 7 have you removed in total?
a) How many 4 s in 5 ? 1 remainder 1
b) Carry the remainder in front of the next digit, then how many 4 s in 18 ? 4 remainder 2
c) Carry the remainder in front of the next digit, then how many 4s in 24? 6
d) How many 4 s in 584 ?

The following are some suggested websites that can help with supporting your child's maths.

BBC Maths
